①

A survey was carried out to find the distribution of the lengths of index fingers. The data was recorded in a grouped frequency table.

| Length of index finger, l mm | Frequency | Frequency density |
|--------------------------------|-----------|-------------------|
| $0 \leq l < 40$ | 0 | $0 \div 40 = 0$ |
| $40 \leq l < 50$ | 3 | $3 \div 10 = 0.3$ |
| $50 \leq l < 55$ | 5 | $5 \div 5 = 1$ |
| $55 \leq l < 60$ | 15 | $15 \div 5 = 3$ |
| $60 \leq l < 65$ | 25 | $25 \div 5 = 5$ |
| $65 \leq l < 70$ | 10 | $10 \div 5 = 2$ |
| $70 \leq l < 90$ | 2 | $2 \div 20 = 0.1$ |

Complete the frequency density column in the table above and hence draw the histogram for the data using the axes below. [3]

Frequency density

Turn over.

②

There are 100 pupils in Year 9. The time taken by each pupil to answer a mental mathematics question was recorded. The following grouped frequency distribution was obtained.

| Time, t seconds | $0 < t \leq 10$ | $10 < t \leq 20$ | $20 < t \leq 30$ | $30 < t \leq 40$ | $40 < t \leq 60$ |
|-------------------|-----------------|------------------|------------------|------------------|------------------|
| Number of pupils | 8 | 17 | 25 | 38 | 12 |

(a) Find an estimate for the median of this distribution.

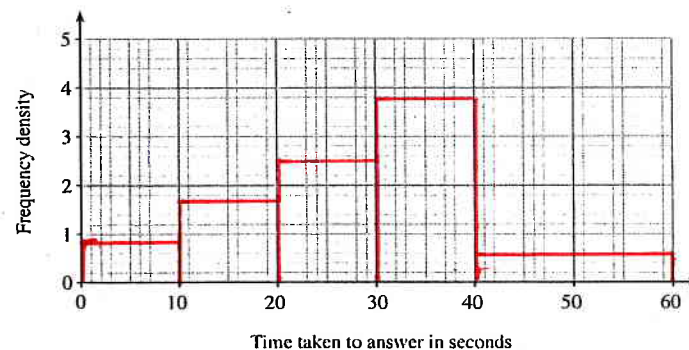

100 pupils so median is 50th pupil.

1st 8 ≤ 10 , 1st 25 ≤ 20 , 1st 50 ≤ 30

So estimate 50th pupil taken 30 seconds. [1]

(b) Draw a histogram to illustrate the distribution on the graph paper below.

Frequency density: 0.8 | 1.7 | 2.5 | 3.8 | 0.6

[2]

Turn over.

- 3 As part of an investigation, the time taken to undo three knots in a piece of string was measured for each pupil in a group of twelve year olds. The histogram below illustrates the results obtained.

- (a) Use the histogram to calculate the number of twelve year olds in this group.

$$30 + 40 + 50 + 40 + 20 = 180$$

- (b) The time taken to undo three knots in a piece of string was measured for each pupil in a group of 200 sixteen year olds. The following grouped frequency distribution was obtained.

| Time, t seconds | $0 < t \leq 10$ | $10 < t \leq 20$ | $20 < t \leq 30$ | $30 < t \leq 40$ | $40 < t \leq 60$ |
|-------------------|-----------------|------------------|------------------|------------------|------------------|
| Number of people | 45 | 55 | 60 | 30 | 10 |

- (i) Find an estimate for the median of this distribution.

200 pupils so median is 100th pupil
 1st 45 pupils ≤ 10 , 1st 100 pupils ≤ 20
 So estimate median pupil takes 20 seconds [1]

- (ii) Draw a histogram to illustrate the distribution on the graph paper below.

Frequency density:

[2]

- (c) State, with a reason, which of the two groups is the better, on average, at undoing knots.

The 16 year olds are better - only $10/200 = 5\%$ take longer than 40 secs compared to $20/180 = 11\%$ of the 12 year olds. [1]

- 4 A survey was carried out to measure the lengths of the gardens of a number of houses. The histogram shows the results of the survey.

- (a) Use the histogram to calculate the number of gardens measured.

$$(10 \times 2) + (10 \times 4) + (10 \times 3.5) + (20 \times 1.25)$$

$$20 + 40 + 35 + 25$$

$\therefore 120$ gardens

- (b) Find the length exceeded by 50% of the gardens measured.

50% of gardens = 60 gardens
1st 60 gardens measure less than 20 metres

\therefore 50% of gardens exceed 20 metres

- 5 A survey was carried out to measure the lengths of the driveways to a number of houses. The histogram shows the results of the survey.

- (a) Use the histogram to calculate the number of driveways measured.

$$(2 \times 3.5) + (6 \times 2.5) + (10 \times 3.2) + (2 \times 2.5)$$

$$7 + 15 + 32 + 5$$

$= 59$ driveways measured

[3]

- (b) Find the length exceeded by 75% of the driveways measured. Give your answer to 2 decimal places.

Need to find length of driveway for 1st 25%

$$0.25 \times 59 = 14.75 \text{ driveways}$$

1st 7 driveways in 0 \rightarrow 2m bar.

So next $(14.75 - 7 = 7.75)$ drives in 2 \rightarrow 8 bar

$$\text{Area} = 2.5 \times x$$

$$7.75 = 2.5 \times x$$

$$x = \frac{7.75}{2.5} = 3.1$$

\therefore 75% of driveways exceed $(2 + 3.1) = 5.1$ metres in length.

- 6 The histogram below represents the results of gathering and measuring the lengths of twigs.

Frequency
density

- (a) Use the histogram to complete the grouped frequency table below.

| Length, l cm | $0 \leq l < 20$ | $20 \leq l < 30$ | $30 \leq l < 40$ | $40 \leq l < 50$ | $50 \leq l < 70$ |
|-----------------|--------------------|--------------------|--------------------|--------------------|--------------------|
| Number of twigs | $20 \times 4 = 80$ | $10 \times 5 = 50$ | $10 \times 7 = 70$ | $10 \times 6 = 60$ | $20 \times 2 = 40$ |

[2]

- (b) Find the fraction of twigs that are 40 cm or longer, expressing your fraction in its lowest terms.

$$\frac{\text{No. of twigs } \geq 40}{\text{Total twigs}} = \frac{100}{300} = \frac{1}{3}$$

[1]

- (c) Calculate an estimate of the number of twigs with length less than 22 cm.

$$(20 \times 4) + (2 \times 5) \\ 80 + 10 \\ = 90 \text{ twigs measure less than 22 cm}$$

[3]
